

TENA® UNDERPADS

Multipurpose Underpads

TENA Regular Underpad

2 sizes -

350 (43 x 61 cm), **352** (58 x 91 cm)

- basic multipurpose protection
- soft non-woven topsheet; fluff mat, waterproof backsheet

TENA Extra Underpad

2 sizes -

353 (43 x 61 cm), **355** (58 x 91 cm)

- multipurpose protection with moderate absorbency
- soft non-woven topsheet; fluff mat, waterproof backsheet

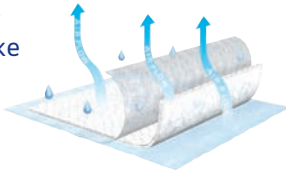

Specialty Underpads

TENA Air Flow Underpad

1 size - **370** (58 x 91 cm)

- specially designed for use on low air loss therapy beds to maximize air circulation
- breathable nonwoven backsheet allows air to circulate
- absorbent fluff mat; superabsorbent polymer microbeads; soft cloth-like topsheet

TENA InstaDri Air™ Underpad

2 sizes - **359** (58 x 91 cm), **360** (76 x 91 cm)

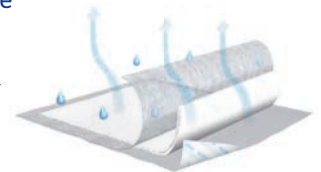

- suitable for all bed surfaces including pressure relief mattresses and overlays
- moisture lock controls odours and bacteria
- special breathable film allows moisture vapour and excess heat to escape
- superabsorbent polymer micro beads wick fluid away to help keep skin dry and comfortable

TENA InstaDri Air™ Securepad Underpad

1 size - **61314** (76 x 91 cm)

- repositioning pad with our strongest backsheet
- high absorbency – holds over 10 cups of liquid
- moisture lock controls odours and bacteria
- special breathable film allows moisture vapour and excess heat to escape, helping to prevent skin breakdown
- waterproof: suitable for all bed surfaces including pressure relief mattresses and overlays
- super absorbent polymers capture and wick fluid away to help keep skin dry and comfortable

TENA Bariatric Underpad

1 size - **361** (91 x 91 cm)

- full coverage provides comfort and protection for larger body types
- large surface area - more bed coverage

Strong, cloth-like non-woven backing	Strong, cloth-like non-woven backing
<p>Permeable means air can flow through as well as excess heat and moisture vapour.</p>	<p>Breathable but air cannot flow through.</p> <p>Excess moisture in the form of vapour and heat can escape through the “pores” but air and water molecules are too big to pass through.</p>
<p>Because it is completely permeable, sometimes moisture can pass through the backing if there is excessive drainage. To avoid “striethrough” we recommend this product be used only on low and high air loss beds. It works best in tandem with the air seeping through the specialty LOS bed cushions.</p>	<p>Can be used on any bed and support surface because it is waterproof.</p>
<p>The absorbent materials work in combination with the air circulating from a low air loss bed to help to keep the skin dry.</p>	<p>If air circulation is the most desirable effect, then Air Flow with a low or high air loss bed would be recommended.</p> <p>If generally maintaining a healthy microclimate for the skin by allowing excess moisture vapour and heat to escape, then choose InstaDri Air™ underpads.</p>
